Alberta Beef Producers... Calgary AB:

Alberta direct cattle sales this week have seen light trade develop with dressing ranged from \$495.00-\$505.00/cwt delivered, steady to \$5.00/cwt lower than the previous week. Cattle that traded were being scheduled for December delivery. Some cattle were bought flat with no heavy weight carcass discounts, but that was not widespread as a lot of the sales had heavy weight carcass discounts at 1,050lbs. Alberta fed basis levels strengthened this week, which encouraged producers to keep shuffling cattle along. There have been reports that one plant is doing scheduled maintenance or upgrades which could result in lighter slaughter rates.

Boxed Beef Cutouts:

USDA Estimated Boxed Beef Cut-out Values as of 2:30 PM on 10/31/25

Based on negotiated prices and volume of boxed beef cuts delivered within 0-21 days and on average industry cutting yields. Values reflect U.S. dollars per 100 pounds.

The theory behind the "Bullish/Bearish Consensus" indicator is that when the public reaches a consensus, they are usually wrong:

- They get too bullish after prices have risen and too bearish after they have already fallen.

Because of this tendency, there are often extremes in opinion right before major changes in trend:

- When the public reaches a bullish extreme, i.e., a great majority thinks prices will keep rising, then prices often decline instead.
- And when they become too bearish, then prices tend to rise.

So when Public Opinion moves above the **red dotted line** in the chart, it means that compared to other readings over the past year, you're seeing **excessive optimism**. You also want to look at the absolute level of Opinion, too - if it's at 90%, then there's no question we're seeing an historic level of bullish opinion. Watch for readings above 80% (or especially 90%) to spot those dangerous times when the public is overly enthusiastic about a commodity.

Conversely, when Public Opinion moves below the **green dotted line**, then the public is **excessively pessimistic** about the commodity's prospects for further gains compared to their opinion over the past year. Looking for absolute readings under 20% (or especially 10%) often indicates an upturn in the market.

Major stock indexes mixed amid narrow, large-cap tech-driven rally

U.S. equity indexes closed the week mixed, with large-cap indexes posting gains and smaller-cap indexes declining. The technology-heavy Nasdaq Composite led the way for the major indexes, boosted by continued outperformance from the mega-cap technology companies benefiting from artificial intelligence spending. Market breadth was notably narrow, however, as the S&P 500 Index advanced despite seven of its 11 sectors losing ground, and an equal-weighted version of the index underperformed the market-cap weighted index by 268 basis points (2.68 percentage points).

Fed lowers rates, tempers expectations for December cut

The other major event on the calendar for the week was the Federal Reserve's October monetary policy meeting. On Wednesday, the central bank announced that it would lower its target rate for the federal funds rate by 25 basis points (0.25 percentage points) to 3.75%-4.00%, as was widely expected.

Notably, however, two policymakers dissented, with Fed Governor Stephen Miran favoring a 50-basis-point cut and Kansas City Fed President Jeffrey Schmid voting to keep rates unchanged. The dissents highlighted the growing divide between Fed officials as they attempt to determine the appropriate path forward amid persistently above-target inflation and a weakening labor market.

Speaking after the meeting, Fed Chair Jerome Powell pushed back against investors who were expecting further easing this year, stating that another rate cut at the central bank's December meeting "is not a foregone conclusion." Powell also suggested that, given the lack of economic data due to the ongoing federal government shutdown, policymakers could take a more cautious approach in December.

Looking ahead...

Over the next 5 days (October 30 - November 3), a large part of the Lower-48 is expecting little or no precipitation, specifically most areas from the Appalachians to the Pacific Coast. Light to moderate amounts are forecast for most of interior New England, the central and southern Appalachians, the Oregon Cascades and Coast, the higher elevations of the Intermountain West, much of peninsular Florida, and portions of the South Atlantic Coastal Plain. Heavier amounts exceeding 1.5 inches are anticipated across the Washington Cascades and Coast, isolated spots near the central and western Gulf Coast, and the middle and upper Ohio Valley, most of a broad swath from Maryland through New York, and the Florida Keys. Daily high temperatures are forecast to average 2 to 4 deg. F below normal across the Southeast, and near normal over the Northeast and the Lower Mississippi Valley. Unusual warmth featuring daily Highs 4 deg. F or more above normal is expected across the northern Great Plains and most locations from the High Plains to the Pacific Coast, outside the Pacific Northwest. Average daily highs could reach 10 to 14 deg. F above-normal across the eastern Great Basin and the central and northern Rockies.

During November 4 - 8, wetter than normal weather is again expected in the Pacific Northwest, expanding to cover the northern Intermountain West, western Great Basin, and central through northern California. Odds for wetness exceed 50 percent from western California through central and western parts of Washington and Oregon. Elsewhere, wet weather is marginally favored in much of the South Atlantic, south-central and southeastern Alaska, and portions of northern Alaska. Meanwhile, most of a large swath from the Rockies to the Appalachians have enhanced odds for drier-than-normal conditions, with chances topping 50 percent across New Mexico and the western half of Texas. Subnormal precipitation is also marginally favored across all but the eastern fringe of the Big Island in Hawaii. Warmer precipitation is also marginally favored across the Great Lakes and lower Ohio Valley through most areas from the Mississippi Valley to the Pacific Coast. Enhanced chances for warmer-than-normal weather also cover southern Florida, south-central and eastern Alaska, and Hawaii. Most areas over and near the central Rockies have chances for warmth exceeding 80 percent. Subnormal temperatures are only favored in New England and adjacent New York. In other areas, near normal temperatures are most likely.
